

# Midwifery Practice Model Set

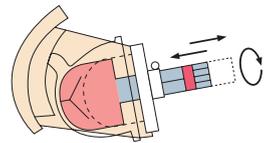

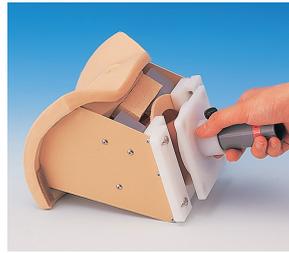

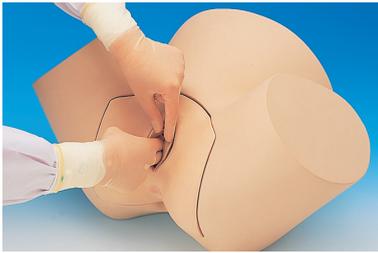

with storage case

## ■ Outline

A series of midwifery techniques such as diagnosis of the stage of pregnancy, obstetric assistance and episiotomy suturing can be practiced by interchanging several parts. This model allows trainee to practice midwifery techniques based on L.D.R. Concept (Labor, Delivery, and Recovery). Improved Vaginal Examination Model, and Obstetric Assistance Model and newly developed Perineo-Suture Model make possible more practical training.

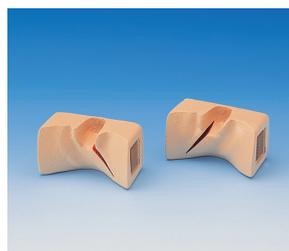

### Vaginal Examination

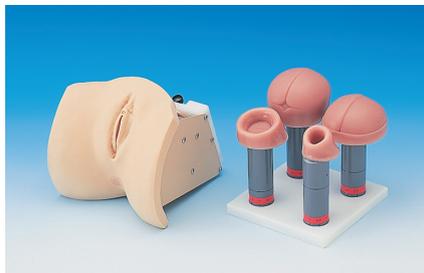

### Obstetric Assistance

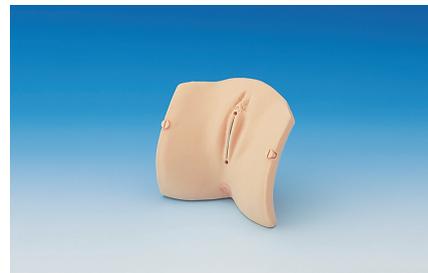

### Perineo-Suture

## Midwifery Practice Model Set LM-063A Spare Parts

**Vaginal Examination Model - Vulva LM-0631**  
with 3 dilation uterus models and fetal head model

**Obstetric Model - Vulva LM-0632**  
replacement part

**Fetal Model LM-0633**  
Height: about 42 cm  
Weight: about 2.3 kg  
Circumference of head: about 30 cm

**Placenta Model LM-0634**  
O.D.: about 19 cm  
Weight: about 700 g  
Length of umbilical cord: about 30 cm

**Perineo-Suture Model - Vulva LM-0635**  
with 1 pc each of left and right laceration model

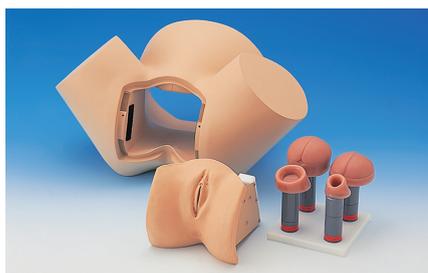

**Perineo-Suture Model LM-0636**  
replacement part  
Left laceration 5 pcs  
Right laceration 5 pcs

**Midwifery Practice Model - Main body LM-0637**  
with cloth cover and obstetric assistance guide  
Dimensions: 54 (W) × 28 (H) × 29 (D) cm  
Weight: 2.4 kg

## Various sets

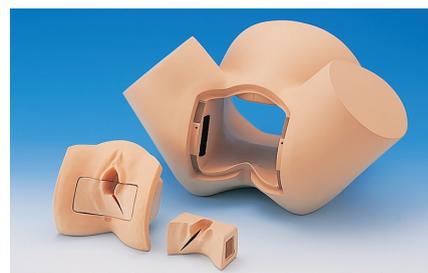

**Vaginal Examination Model Set LM-0631 + LM-0637**  
with main body

By replacing uterus models with three different dilations and fetal head model, and by adjusting the descent and rotating the model, the position of posterior fontanel sagittal suture can be changed. With these functions, diagnostic technique in delivery progress is acquired. Since the uterus parts are made of very lifelike material, the cervical canal can be realistically confirmed. This model is the most suitable for palpation practice.

**Obstetric Assistant Model Set LM-0638**  
with main body

The perineum is elastic allowing for increased durability at the extraction. A lifelike model for practical obstetric training. By using lubricant at the extraction, resistance is decreased, allowing realistic practice. Practical perineal care training is possible.

**Perineo-Suture Model Set LM-0635 + LM-0637**  
with main body

Perineo Suturing of soft birth canal laceration can be practiced. Because of the very lifelike material of the soft birth canal, the feeling of the suture can be realistically confirmed. The model is the most suitable for suture practice.
